

## SIR2002 and SIRxs Support

Gryphon Management Consultants personnel have been creating SIR databases since 1984 and have maintained a continuous relationship with the product through its evolution from a text based 4GL Ver 2 through to the current SIRxs full function GUI.

SIR (Australia) designs, develops, distributes and supports the SIR Relational Database Management System and Application Development System which is a wholly Australian owned and developed system aimed primarily at research and scientific applications. It includes full relational and hierarchical database structures, query language, reporting language, interactive and batch data entry facilities, 4GL, analytical procedures and application development utilities.

Gryphon supports the SIR product in:

- Application design and deployment
- SIR training
- Application support, maintenance and enhancement
- Heartbase™ sales, service and support
- Survey Analysis

Training is tailored to the particular needs of clients. An indication of content and prices is provided below. In most cases the clients database is preferred over the “Company” database for training purposes.

Course	Content	Duration/Cost
Introduction to SIR Databases	Database design, schema, database structures, utilities, security, integrity, DBA roles	1 day
Visual PQL/PQL	PQL History, structures, sample programs, sub routines, procedures, concurrency, web interface, ODBC	2 days
Procedures, SQL, Forms, Tabfiles	Tabfiles, SPSS interfaces, condescriptives, graphs, SQL statement, Forms/PQL Forms	1 day
Report Generator	Power of the report generator, break points, boolean conditions, pre-processing, structure of reports	1 day

Full day training session for up to 8 persons is charged at \$1350 plus GST but inclusive of all other costs (client to provide pc's). Half day training sessions are charged at \$750 plus GST

Application development is subject to a scoping study and fixed price quotation. An indication of rate is calculated on the basis of \$960 per day plus GST.

Heartbase™ has a proven track record in improving cardiac patient care. Contact Gryphon for sales and service enquiries. Survey Analysis utilizes an application developed by Gryphon and adaptable to any survey analysis issue. The cost depends upon the scope of the surveying task.
